Claims 1-22 are pending in the instant application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- i. Applicants are required to elect **a single primer pair** from claims 1-5, 8, 10, 11, 13, 14 or 19, and
- ii. Applicants are required to elect **a single target sequence** from claims 12, 15 or 17.

The inventions are distinct, each from the other because of the following reasons:

The different inventions drawn to each nucleic acid or SEQ ID NO are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different and distinct nucleic acids, and methods comprising them are biologically, structurally and functionally different and distinct from each other. The compositions comprising distinct nucleic acid molecules, or primer pair and corresponding target sequence, each comprise a different and distinct composition. For these reasons, the inventions of these different Groups are patentably distinct.

Furthermore, searching the inventions of Groups comprising all of the different nucleic acid sequences together would impose a serious search burden. In the instant

Art Unit: 1635

case, the search of the distinct compositions are not coextensive. There is a search burden also in the non-patent literature. Prior to the concomitant construction and utilization of the different nucleic acid constructs of interest there may be journal articles devoted solely to one Group or nucleic acid that would not have described the compositions and methods of the other Group. Searching, therefore is not coextensive. As such, it would be burdensome to search the inventions of the different Groups together.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different nucleic acids are unrelated as they comprise distinct nucleic acid constructs or sequences, and each Group constitutes a biologically, chemically and functionally distinct and different composition and therefore each involves a patentably distinct invention. For these reasons the inventions of these different Groups are patentably distinct.

Pursuant to 35 U.S.C. 121 and 37 C.F.R. 1.141, the different primer pairs from claims 1-5, 8, 10, 11, 13, 14 and 19, and the single target sequences from claims 12, 15 or 17, and encompassed by claims 1-22 are subject to restriction. In the instant case, one independent and distinct nucleic acid primer pair and target sequence will be examined in a single application without restriction. Those sequences which are patentably indistinct from the sequence or region selected by the applicant will also be examined.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
